1. Fiduciary Duty & Independence of Advisory Engine

FinTrackPro functions strictly as an execution, aggregation, and analytical platform. All mutual fund data ingested via the automated MFAPI.in synchronization pipeline adheres to AMFI standards. Under SEBI (Investment Advisers) Regulations, 2013, the platform separates direct execution and advisory workflows, ensuring investors receive unconflicted, transparent portfolio analytics.

2. Commission & Expense Ratio Disclosure (Direct vs Regular Plans)

In accordance with SEBI Circular SEBI/HO/IMD/DF2/CIR/P/2018/137, FinTrackPro explicitly surfaces the Total Expense Ratio (TER) differential between Direct and Regular mutual fund schemes. Investors are notified that investing in Direct Plans bypasses distributor trailing commissions, yielding compounded savings of 0.5% to 1.5% per annum over investment horizons.

3. NAV Synchronization & Valuation Timelines

Net Asset Values (NAVs) are published by Asset Management Companies (AMCs) and processed daily at 11:15 PM IST via FinTrackPro's automated batch synchronization engine. Historical valuations, CAGR computations, and Newton-Raphson XIRR calculations are derived from verified AMFI published data feeds with zero manual tampering.

4. Risk Profiling & Asset Allocation Suitability

Before processing any mutual fund transaction or recurring SIP order, the system mandates a 5-dimension risk questionnaire evaluating investment horizon, loss tolerance, liquidity needs, and financial goals, adhering to SEBI circular CIR/MIRSD/66/2016.
